

## Welcome to the latest edition of our Range Brochure

This brochure contains over 250 innovative new products. Many of these new products have been inspired by queries and comments from our customers. Please do not hesitate to contact us if you can not find what you are looking for.

### **SteriWare ULTRA Range**

SteriWare ULTRA is a range of high quality, single use products for very demanding applications. These products are all double bagged and are made with polymers that conform to the latest standard (USP Class VI, FDA and EU). See pages 12 to 47.

### **Metal Detectable Range**

Another new range is our Metal Detectable Range. We have a wide range of products manufactured from a special food grade metal detectable polymer. The polymer is not only metal detectable but is also visible to x-rays. See pages 133 to 138.

### **Over 250 NEW Products**

In addition to introducing several completely new product ranges we have also added many new products to existing ranges.

### **Huge Stocks for Fast Deliveries**

We hold well over 95% of our range in stock for immediate world-wide shipping.

We hope that you find what you require but if you have any queries, please do not hesitate to contact our friendly sales team.

To Lab

To Production

From the initial design to the final stages of manufacturing, we immerse ourselves in the entire process of developing our products. This ensures that our high standards of quality and efficiency are maintained, while allowing us complete control over every detail from prototype to the final delivery.

Implementing the latest design techniques and cutting edge manufacturing technology, we offer a diverse and comprehensive range of sampling equipment, available to order from stock.
